# Innovative platform for measurement and meter data processing

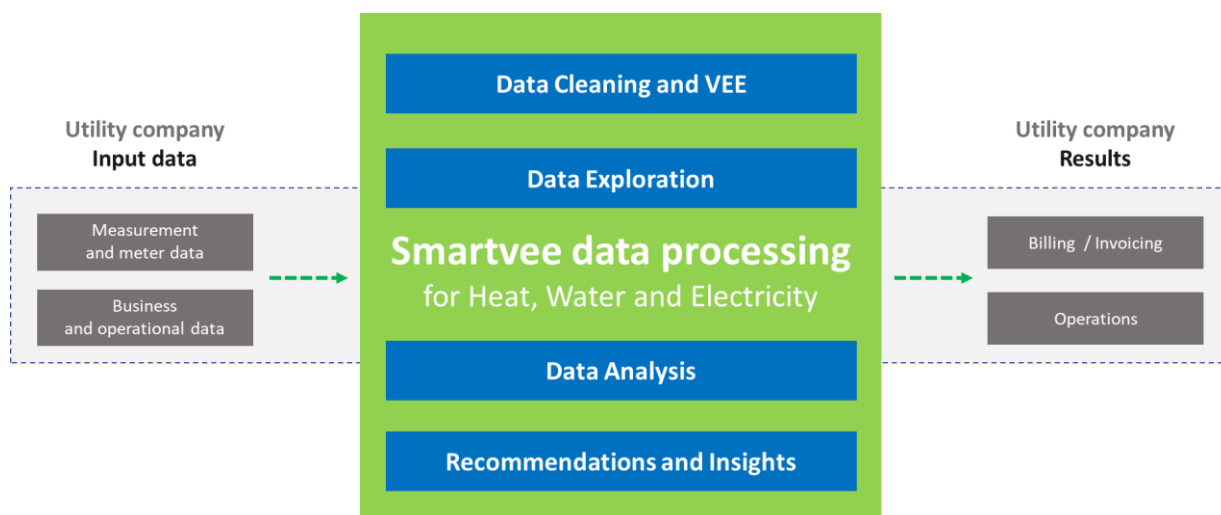

## You need quality measurement data

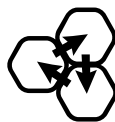

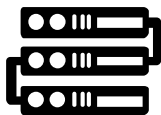

Utility companies are gathering ever larger volumes of measurement and meter data. The data often comes from multiple sources and is validated, processed and estimated in a low-tech way for billing and invoicing.

Then issues arise:

- Slow detection of anomalies, including losses, outage and fraud
- Costly complaints procedures for invoicing errors
- Problematic forecasting of demand and consumption

## You need quality measurement data processing

### Automated data cleaning and VEE process

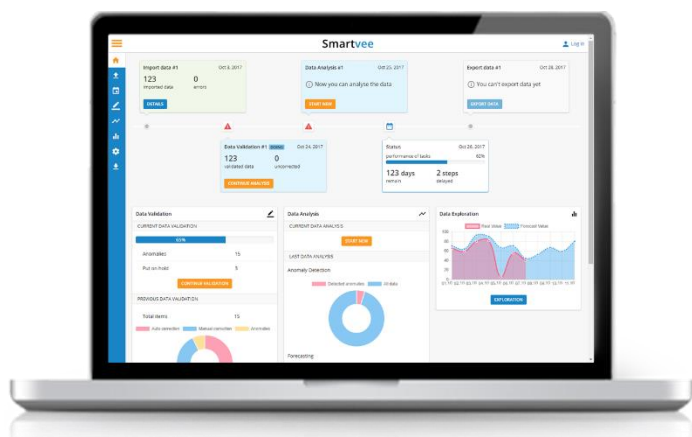

- Flexible meta-data model
- Validation and correction of measurement data based on configurable rules

### Advanced data analysis and data exploration

- Based on historical, business and operational data
- Real-time anomalies detection using configurable algorithms and analytical models
- Forecasting using prediction analysis

### Active insights and recommendations

- Business and operational recommendations based on validation rules and predictive analysis algorithms
- Results given in one, comprehensive user-friendly tool

Hands-on industry expertise combined with exceptional User Experience and Timeline-based data processing management

## Benefits and values

Higher accuracy of demand and consumption forecasting

Lower number of frauds and losses

Higher efficiency of accounting process (meter-to-bill)

Unified and correct measurement and consumption data

Active business and operational recommendations

Results of analysis available anytime, anywhere

# Choose your delivery option

You want to start with a ready-to-use solution and don't want to make any upfront investment.  
Choose:

## SaaS

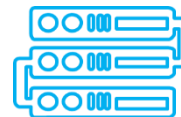

You don't want to invest in infrastructure and need to integrate with your solutions.  
Choose:

## Cloud

You want a tailored solution and need full integration with your solutions and infrastructure.  
Choose:

## On-site

## About ConnectPoint

We are a software house & system integrator focused on digitalization of the power, utility & industry sectors.

ConnectPoint specializes in IoT and IT/OT integration, combining industry specific knowledge with our integration competences and knowledge of big data, GIS, business intelligence & machine learning.

Our customers range from major multinational companies to local water, power and heat suppliers.

We partner leading global technology leaders in the field of IT/OT, Big Data and real-time data processing.
