

DATACENTER CLARITY LC

Leading Provider of DCIM Software Solutions and Technical Services

Datacenter Clarity LC provides the tools to accurately and efficiently manage datacenter infrastructure. Equipped with a complete real-time picture of asset attributes in 3D, DC Clarity LC helps decision makers create the most efficient possible datacenter configuration by placing state of the art engineering software tools in the hands of stakeholders. With Datacenter Clarity LC, datacenter managers optimize equipment placement and energy consumption in order to increase the longevity and availability of the datacenter infrastructure.

Advantages

DC Clarity LC will allow you to:

- Gather ALL data from ALL asset types with our hardware-agnostic real-time monitoring engine
- Track unlimited assets at unlimited sites with our user-based license model
- Provide visibility to managers, operators and customers with our user friendly web interface
- Automate maintenance or event process using our workflow management feature
- Easily migrate and import your data into DC Clarity LC using our simple excel template

Applications

Colocation Operation

Multi-site Management

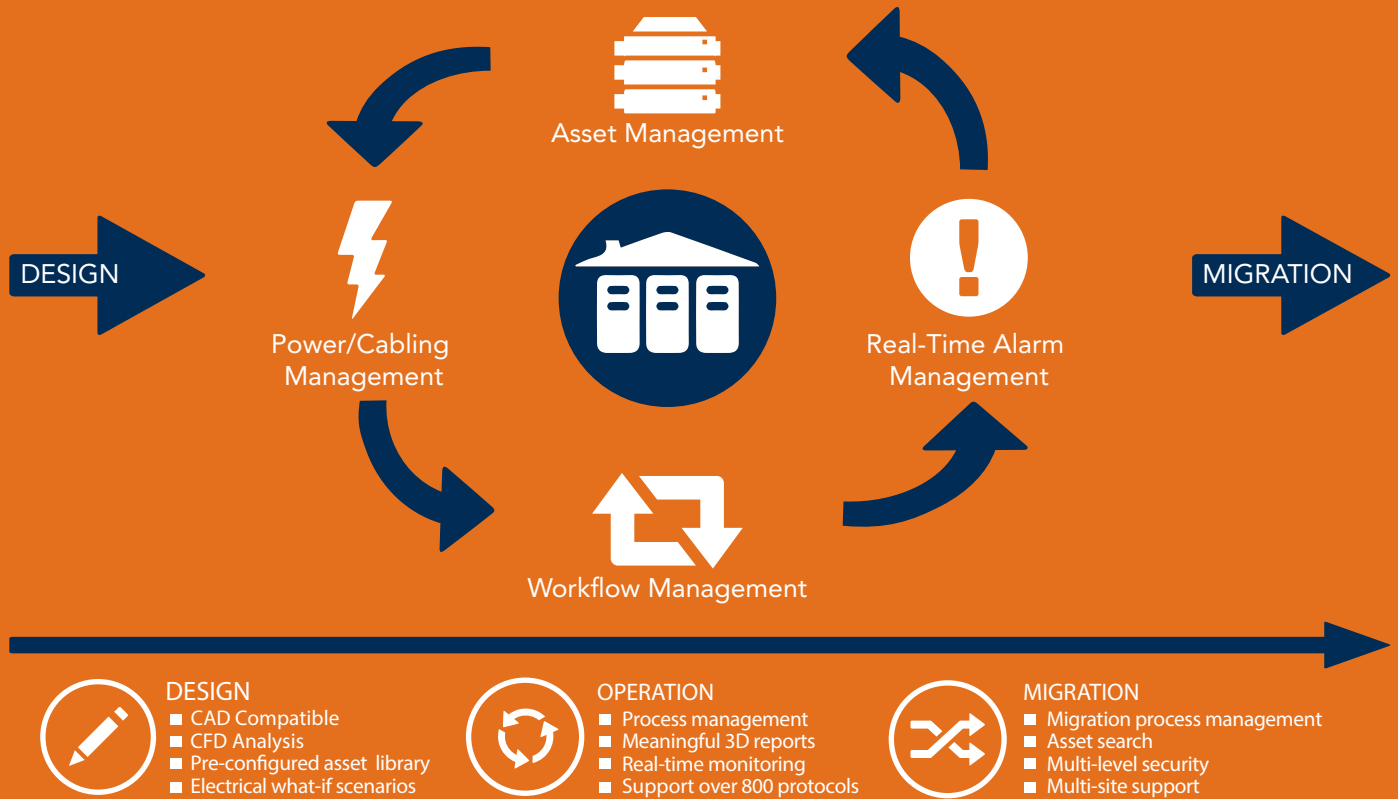

Multi-tenant Chargebacks

Central NOC

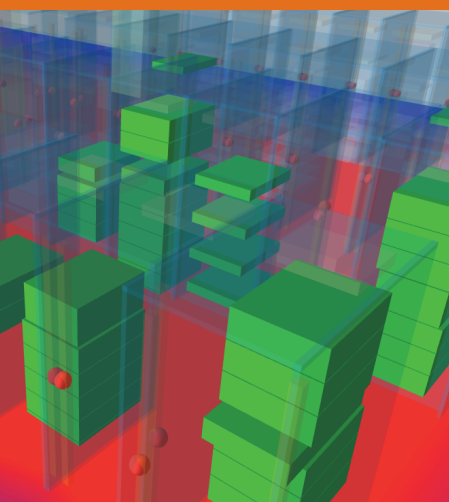

The Datacenter Clarity LC Difference

Datacenter Clarity LC's expertise was developed over decades across dozens of engineering disciplines and deployed in multiple industries varying in breadth and depth. We bring our skill and know-how to deliver valuable insight to enhance your product development processes. The world's top tier engineering organizations rely on Datacenter Clarity LC's experience and expertise to achieve the full potential of their software and PLM investment.

DATACENTER LIFE CYCLE MANAGEMENT

DCIM Services

Maya's Service Team Can Help You:

- Use existing data to create the virtual representation of your datacenter
- Perform on-site inventory of all assets
- Quickly create all configurations so you can start using the system on day 1
- Develop CFD models and provide recommendations to optimize cooling systems
- Define custom asset attributes and operation meaningful dashboards/reports
- Produce custom work orders and process workflows
- Migrate you existing data to Datacenter Clarity LC
- Install the software and configure your organization's parameters as a turn-key solution
- Transfer knowledge to bring the operation team to reach full autonomy
